QOHASH

QOSTODIAN

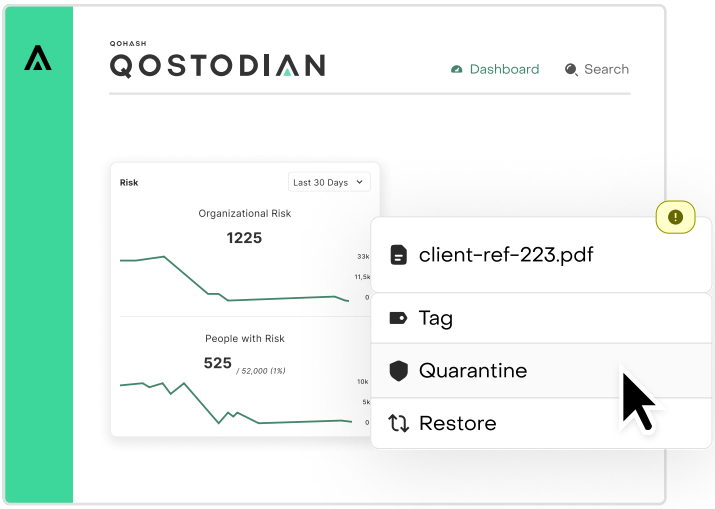

Discover, classify, and remediate sensitive data.
Enforce security and governance directly at the source.

Gartner ★★★★½ G2 ★★★★½

The Qostodian approach

Qohash analyzes and protects sensitive data right where it lives, inside your own environment, without having to move it.

- Files are never moved or copied from their original location for analysis.
- Nothing is sent to Qohash for analysis; only findings are centralized.
- Leverage conditional workflows to automate remediation and alerts.
- Discover sensitive data by information, file, person and data source.

Major advantages

Classification and remediation run where your data lives, so nothing is copied to a vendor cloud and the price never moves with data volume.

Tracks specific data elements across files with precision.

Optimized for a short time to value, to deliver actionable insights fast.

Provides all-in, flat-rate pricing with no surprise costs.

Straightforward rollout and operationalization

Enable data-centric governance, risk, and compliance

Visibility →

Phase 1

Discover sensitive data in files

Deploy quickly to locate and classify sensitive data with role-based controls.

Governance & compliance →

Phase 2

Reduce measured risk fast

Most customers achieve a 75% risk reduction in the first 90 days.

Control →

Phase 3

Continuous threat management

Ensure 24/7 compliance through integrated monitoring and incident management.

95 % | More than 95% of sensitive-data risk sits in fewer than 5% of files. Qostodian finds those files first.

Compliance and data control

Qohash holds no copy of your data: classification runs inside your environment, so your security tool never adds to your attack surface.

Remediation on the live file: delete, quarantine, or message the owner in Teams.

Audit-ready evidence in one place: what was found, who could reach it, and what was fixed and when.

A finding holds a location, a type and a count, never your content.

Enrich your DLP rules with real data context: who has access, where data lives, and how critical it is.

Qohash secures the sensitive data your AI and your people reach: on file servers, laptops, collaboration platforms and in the flow of AI requests. With Qohash, your data is never exported, copied or moved to be analyzed. Security comes to the data, for regulated, public and defence organizations.
